

# Contents

Part I Preliminary Notions	
<b>1 Introduction</b>	3
1.1 Phase Transitions	3
1.2 The Ising Model	18
1.3 Ernst Ising	20
A Ensembles in Classical Statistical Mechanics	21
B Ensembles in Quantum Statistical Mechanics	26
Problems	38
<b>2 One-dimensional Systems</b>	45
2.1 Recursive Approach	45
2.2 Transfer Matrix	51
2.3 Series Expansions	59
2.4 Critical Exponents and Scaling Laws	61
2.5 The Potts Model	62
2.6 Models with $O(n)$ Symmetry	67
2.7 Models with $Z_n$ Symmetry	74
2.8 Feynman Gas	77
A Special Functions	78
B $n$ -dimensional Solid Angle	85
C The Four-color Problem	86
Problems	94
<b>3 Approximate Solutions</b>	97
3.1 Mean Field Theory of the Ising Model	97
3.2 Mean Field Theory of the Potts Model	102
3.3 Bethe–Peierls Approximation	105
3.4 The Gaussian Model	109
3.5 The Spherical Model	118
A The Saddle Point Method	125
B Brownian Motion on a Lattice	128
Problems	140
Part II Bidimensional Lattice Models	
<b>4 Duality of the Two-dimensional Ising Model</b>	147
4.1 Peierls’s Argument	148
4.2 Duality Relation in Square Lattices	149

4.3	Duality Relation between Hexagonal and Triangular Lattices	155
4.4	Star–Triangle Identity	157
4.5	Critical Temperature of Ising Model in Triangle and Hexagonal Lattices	159
4.6	Duality in Two Dimensions	161
A	Numerical Series	167
B	Poisson Resummation Formula	168
	Problems	170
<b>5</b>	<b>Combinatorial Solutions of the Ising Model</b>	172
5.1	Combinatorial Approach	172
5.2	Dimer Method	182
	Problems	191
<b>6</b>	<b>Transfer Matrix of the Two-dimensional Ising Model</b>	192
6.1	Baxter’s Approach	193
6.2	Eigenvalue Spectrum at the Critical Point	203
6.3	Away from the Critical Point	206
6.4	Yang–Baxter Equation and $R$ -matrix	206
	Problems	211
	 Part III    Quantum Field Theory and Conformal Invariance	
<b>7</b>	<b>Quantum Field Theory</b>	217
7.1	Motivations	217
7.2	Order Parameters and Lagrangian	219
7.3	Field Theory of the Ising Model	223
7.4	Correlation Functions and Propagator	225
7.5	Perturbation Theory and Feynman diagrams	228
7.6	Legendre Transformation and Vertex Functions	234
7.7	Spontaneous Symmetry Breaking and Multicriticality	237
7.8	Renormalization	241
7.9	Field Theory in Minkowski Space	245
7.10	Particles	249
7.11	Correlation Functions and Scattering Processes	252
A	Feynman Path Integral Formulation	254
B	Relativistic Invariance	256
C	Noether’s Theorem	258
	Problems	260
<b>8</b>	<b>Renormalization Group</b>	264
8.1	Introduction	264
8.2	Reducing the Degrees of Freedom	266
8.3	Transformation Laws and Effective Hamiltonians	267
8.4	Fixed Points	271
8.5	The Ising Model	273
8.6	The Gaussian Model	277

8.7	Operators and Quantum Field Theory	278
8.8	Functional Form of the Free Energy	280
8.9	Critical Exponents and Universal Ratios	282
8.10	$\beta$ -functions	285
	Problems	288
<b>9</b>	<b>Fermionic Formulation of the Ising Model</b>	<b>290</b>
9.1	Introduction	290
9.2	Transfer Matrix and Hamiltonian Limit	291
9.3	Order and Disorder Operators	295
9.4	Perturbation Theory	297
9.5	Expectation Values of Order and Disorder Operators	299
9.6	Diagonalization of the Hamiltonian	300
9.7	Dirac Equation	305
	Problems	308
<b>10</b>	<b>Conformal Field Theory</b>	<b>310</b>
10.1	Introduction	310
10.2	The Algebra of Local Fields	311
10.3	Conformal Invariance	315
10.4	Quasi-Primary Fields	318
10.5	Two-dimensional Conformal Transformations	320
10.6	Ward Identity and Primary Fields	325
10.7	Central Charge and Virasoro Algebra	329
10.8	Representation Theory	335
10.9	Hamiltonian on a Cylinder Geometry and the Casimir Effect	344
A	Moebius Transformations	347
	Problems	354
<b>11</b>	<b>Minimal Conformal Models</b>	<b>358</b>
11.1	Introduction	358
11.2	Null Vectors and Kac Determinant	358
11.3	Unitary Representations	362
11.4	Minimal Models	363
11.5	Coulomb Gas	370
11.6	Landau-Ginzburg Formulation	382
11.7	Modular Invariance	385
A	Hypergeometric Functions	393
	Problems	395
<b>12</b>	<b>Conformal Field Theory of Free Bosonic and Fermionic Fields</b>	<b>397</b>
12.1	Introduction	397
12.2	Conformal Field Theory of a Free Bosonic Field	397
12.3	Conformal Field Theory of a Free Fermionic Field	408
12.4	Bosonization	419
	Problems	422

<b>13 Conformal Field Theories with Extended Symmetries</b>	426
13.1 Introduction	426
13.2 Superconformal Models	426
13.3 Parafermion Models	431
13.4 Kac–Moody Algebra	438
13.5 Conformal Models as Cosets	448
A Lie Algebra	452
Problems	462
<b>14 The Arena of Conformal Models</b>	464
14.1 Introduction	464
14.2 The Ising Model	464
14.3 The Universality Class of the Tricritical Ising Model	475
14.4 Three-state Potts Model	478
14.5 The Yang–Lee Model	481
14.6 Conformal Models with $O(n)$ Symmetry	484
Problems	486
Part IV Away from Criticality	
<b>15 In the Vicinity of the Critical Points</b>	489
15.1 Introduction	489
15.2 Conformal Perturbation Theory	491
15.3 Example: The Two-point Function of the Yang–Lee Model	497
15.4 Renormalization Group and $\beta$ -functions	499
15.5 $C$ -theorem	504
15.6 Applications of the $c$ -theorem	507
15.7 $\Delta$ -theorem	512
<b>16 Integrable Quantum Field Theories</b>	516
16.1 Introduction	516
16.2 The Sinh–Gordon Model	517
16.3 The Sine–Gordon Model	523
16.4 The Bullogh–Dodd Model	527
16.5 Integrability versus Non-integrability	530
16.6 The Toda Field Theories	532
16.7 Toda Field Theories with Imaginary Coupling Constant	542
16.8 Deformation of Conformal Conservation Laws	543
16.9 Multiple Deformations of Conformal Field Theories	551
Problems	555
<b>17 <math>S</math>-Matrix Theory</b>	557
17.1 Analytic Scattering Theory	558
17.2 General Properties of Purely Elastic Scattering Matrices	568
17.3 Unitarity and Crossing Invariance Equations	574
17.4 Analytic Structure and Bootstrap Equations	579
17.5 Conserved Charges and Consistency Equations	583

A	Historical Development of $S$ -Matrix Theory	587
B	Scattering Processes in Quantum Mechanics	590
C	$n$ -particle Phase Space	595
	Problems	601
<b>18</b>	<b>Exact <math>S</math>-Matrices</b>	605
18.1	Yang–Lee and Bullogh–Dodd Models	605
18.2	$\Phi_{1,3}$ Integrable Deformation of the Conformal Minimal Models	
	$\mathcal{M}_{2,2n+3}$	608
18.3	Multiple Poles	610
18.4	$S$ -Matrices of the Ising Model	612
18.5	The Tricritical Ising Model at $T \neq T_c$	619
18.6	Thermal Deformation of the Three-state Potts Model	623
18.7	Models with Internal $O(n)$ Invariance	626
18.8	$S$ -Matrix of the Sine–Gordon Model	631
18.9	$S$ -Matrices for $\Phi_{1,3}$ , $\Phi_{1,2}$ , $\Phi_{2,1}$ Deformation of Minimal Models	635
	Problems	651
<b>19</b>	<b>Thermodynamical Bethe Ansatz</b>	655
19.1	Introduction	655
19.2	Casimir Energy	655
19.3	Bethe Relativistic Wave Function	658
19.4	Derivation of Thermodynamics	660
19.5	The Meaning of the Pseudo-energy	665
19.6	Infrared and Ultraviolet Limits	668
19.7	The Coefficient of the Bulk Energy	671
19.8	The General Form of the TBA Equations	672
19.9	The Exact Relation $\lambda(m)$	675
19.10	Examples	677
19.11	Thermodynamics of the Free Field Theories	680
19.12	$L$ -channel Quantization	682
	Problems	688
<b>20</b>	<b>Form Factors and Correlation Functions</b>	689
20.1	General Properties of the Form Factors	690
20.2	Watson’s Equations	692
20.3	Recursive Equations	695
20.4	The Operator Space	697
20.5	Correlation Functions	697
20.6	Form Factors of the Stress–Energy Tensor	701
20.7	Vacuum Expectation Values	703
20.8	Ultraviolet Limit	706
20.9	The Ising Model at $T \neq T_c$	709
20.10	Form Factors of the Sinh–Gordon Model	714
20.11	The Ising Model in a Magnetic Field	720
	Problems	725

<b>21 Non-Integrable Aspects</b>	728
21.1 Multiple Deformations of the Conformal Field Theories	728
21.2 Form Factor Perturbation Theory	730
21.3 First-order Perturbation Theory	734
21.4 Non-locality and Confinement	738
21.5 The Scaling Region of the Ising Model	739
Problems	745
<b>Index</b>	747
